

EYE TIGHTENING

Your skin will look fresh and healthy with this procedure, which tightens the skin around the eyes, reducing lines and giving a youthful appearance.

This treatment involves the application of a solution to the skin around the eyes. Loose skin on the lower eyes is the earliest sign of facial ageing. Normally, the skin has a barrier, but once that barrier is penetrated, the solution is absorbed, increasing collagen density and promoting rejuvenation.

Although this is a medical treatment, there is little or no downtime associated with it. You can continue working and socialising as you would normally.

The Treatment

The treatment is performed by Dr Saleh. A solution is applied to the skin of the lower eyes for one or two minutes. The skin feels hot, but it is not painful. No anaesthetic or painkillers are necessary.

Botox treatments may be performed at the same time.

This treatment is also available for the upper eyes.

Following Treatment

Following the treatment, a special antioxidant and recovery cream is applied to the lower eyes, which **should not be washed off** until the following morning.

The following day there may be a little puffiness and redness. You may apply any moisturiser as required. Your normal make-up may also be applied. However, we have found that Nivea cream helps hydrate the skin quickly.

After 3 or 4 days, the skin may appear wrinkly on the lower eyes until it flakes off. The new collagen formation will develop in the subsequent 2–3 weeks.

It is very important to protect the new skin during the first few weeks of recovery.

Sun protection should be worn at all times.

If possible, this treatment should be performed 2 or 3 times a year in order to maintain the benefit.

As always, you can contact us on the number below if you have any questions.
